TI ONE VOICE PLATFORM

Unite. Protect. Empower.

A Comprehensive Overview

onevoice.witysk.org

AGENDA

What we'll cover today

01	**The Challenge**	Why TIs need a unified platform
02	**The Declaration**	A collective statement of solidarity and rights
03	**Platform Overview**	Core features and capabilities
04	**Documentation Tools**	Interviews, timelines, and document management
05	**AI-Powered Support**	Your 24/7 intelligent assistant
06	**Security & Privacy**	How we protect your data
07	**Data Strategy**	From individual stories to collective evidence
08	**Roadmap & Call to Action**	The path forward

01

THE CHALLENGE

Why Targeted Individuals need a unified platform

THE CHALLENGE

Three problems TI One Voice solves

Isolation

Individuals face their experiences alone, without validation or support from others who understand what they are going through.

Scattered Communities

Existing groups are fragmented across platforms with no central, trusted place to organize and take collective action.

No Secure Tools

There is no trusted infrastructure for documenting experiences with verifiable, tamper-proof integrity suitable for legal proceedings.

02

THE DECLARATION

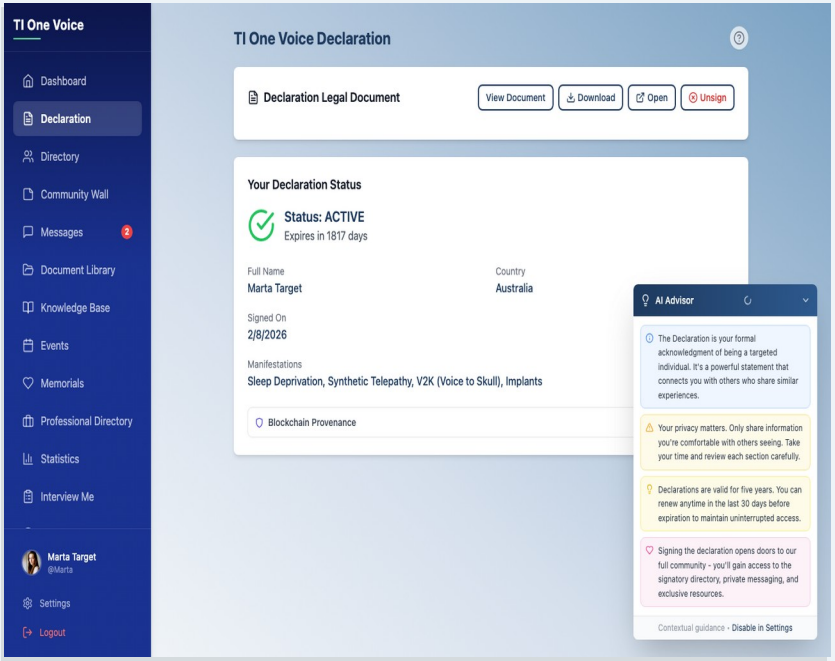
A collective statement that carries the weight of thousands

THE TI ONE VOICE DECLARATION

A formal collective statement of truth and solidarity

The Declaration formally defines:

- What a Targeted Individual is — attacked by V2K, DEW, or other directed technologies
- What the injustice is — torture, assault, crimes against humanity, human rights violations
- What TIs demand — justice, recognition as victims, criminal accountability, protection
- What signing empowers you to do — speak for all signatories, file collective complaints, pursue class action
- Last Will provision — signed permission for fellow TIs to pursue justice even after a signatory's death



SIGNING THE DECLARATION

Blockchain-verified, legally timestamped

01 Review & Sign

Read the declaration, provide your details, country and manifestation types, and formally sign

→ 02 Blockchain Anchor

Your signature is hashed with SHA-3-256 and anchored to a blockchain for immutable proof

→ 03 TSA Timestamp

An RFC 3161 Trusted Timestamp Authority certifies the exact moment you signed

Result: An immutable, verifiable record that proves your declaration existed at a specific point in time — without requiring trust in any single authority. Valid for 5 years, renewable.

03

PLATFORM OVERVIEW

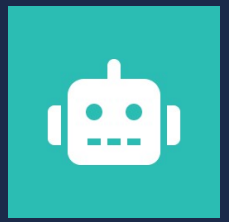
A comprehensive Progressive Web App built for the TI community

PLATFORM OVERVIEW

Four pillars powering a unified community

Digital Declarations

Community Network



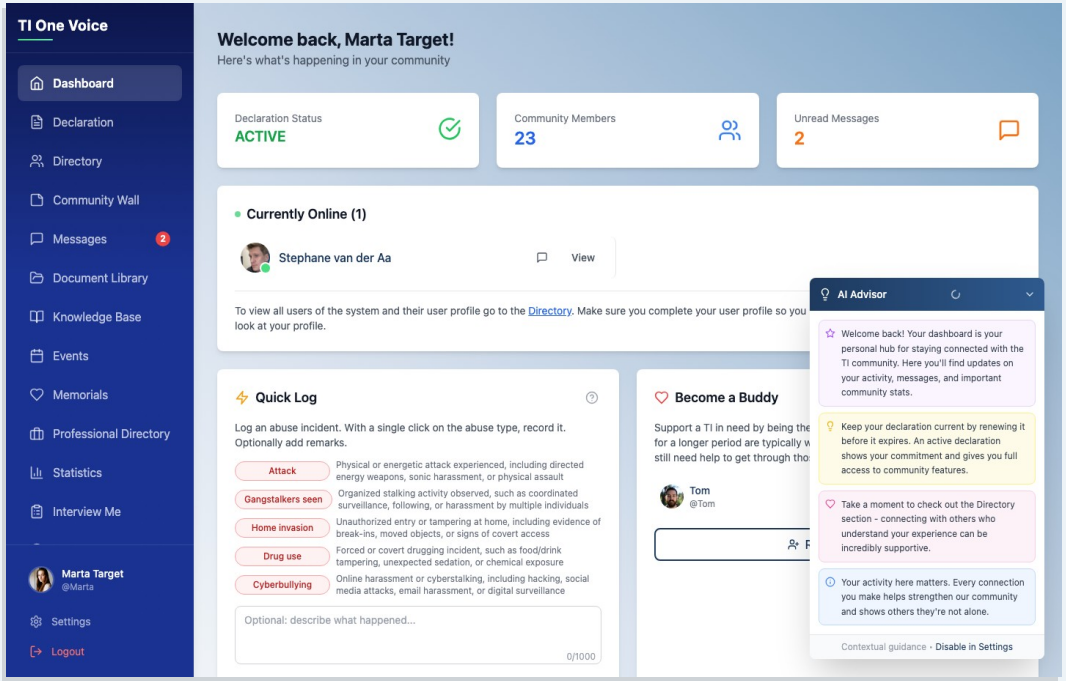
AI-Powered Support

Document Management

A comprehensive Progressive Web App that works on any device — phone, tablet, or desktop. Install it like a native app, access it anywhere, and take control of your experience.

YOUR DASHBOARD

A personalized hub for your TI journey



- Declaration status at a glance
- Community members & online count
- Unread messages notification
- Quick Log for instant incident recording
- Become a Buddy to support new TIs
- AI Advisor with contextual tips

COMMUNITY NETWORK

Connect, share, and support one another

Signatory Directory

Interactive world map showing all signatories. Search by name, country, or city. Connect with nearby TIs.

Secure Messaging

Private one-on-one and group messaging with file attachments, read receipts, and admin support chat.

Community Wall

A shared bulletin board where signatories post updates, encouragement, and solidarity messages.

Events & Memorials

Calendar of community activities, support groups, awareness campaigns, and a memorial space for fallen TIs.

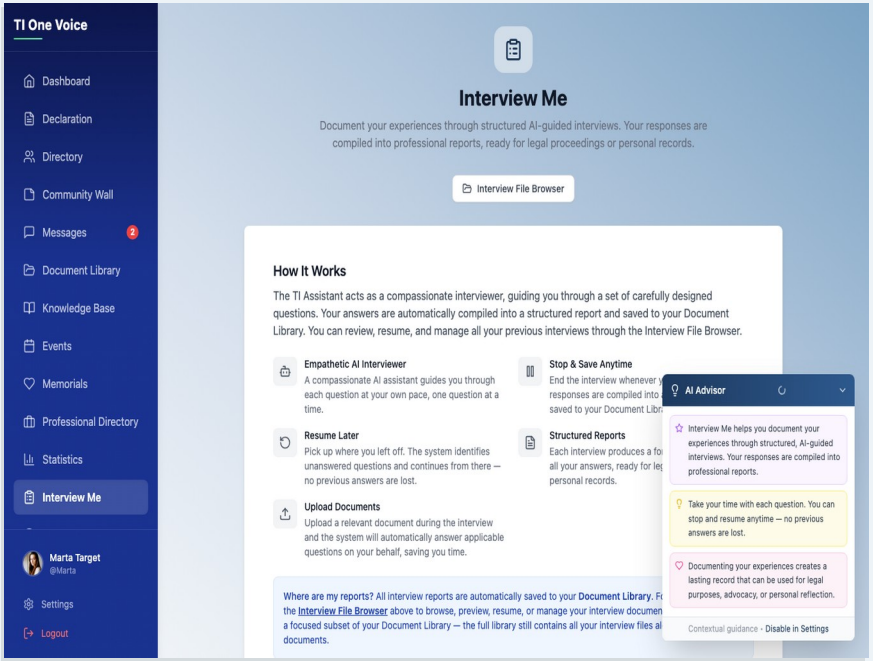
04

DOCUMENTATION TOOLS

Structured tools for building your personal evidence file

INTERVIEW ME

AI-guided interviews for thorough documentation



- **TI Start (Onset)** — Complete story of how targeting began
- **Attack Documentation** — Specific incidents, methods, timing, patterns
- **Damages Assessment** — Physical, psychological, financial harm
- **Evidence & Clues** — Persons of interest, stalking, anomalies
- **Life Events** — Significant events during the targeting period
- **Quick Log** — Fast incident recording as

Upload documents during interviews — the AI automatically extracts relevant information and pre-fills questions

DOCUMENTS & TIMELINE

Secure storage meets AI-powered chronology

Document Library

- Upload PDF, Word, images, and more
- Tag and categorize with custom labels
- Private, Signatories, or Public visibility
- AI-generated summaries of any document
- Blockchain hash + TSA timestamp
- Integrated with TI Assistant for analysis

AI Timeline Generator

- Aggregates all your platform data
- AI identifies and orders key events
- Visual chronological display
- Reveals patterns you may have missed
- Useful for legal consultations
- Regenerates as new data is added

05

AI-POWERED SUPPORT

An intelligent assistant that understands, validates, and helps

TI ASSISTANT

Your 24/7 intelligent companion

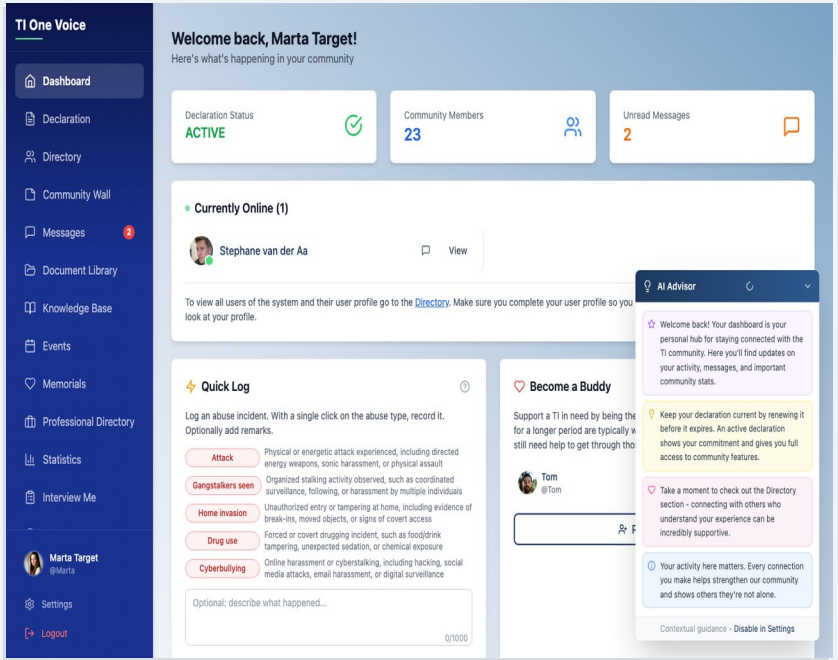
Knowledge Search
Searches curated research papers, legal resources, and TI documentation

Document Analysis
Reads and summarizes any document from your personal library

Live Web Research
Searches the internet in real time for current news and resources

Emotional Support
Provides validation, coping strategies, and mental health guidance

Voice & Speech
Text-to-speech and speech-to-text for accessible interaction



KNOWLEDGE & RESOURCES

Curated research, legal resources, and professional support

Knowledge Base

A curated library of research papers, articles, legal resources, and educational materials. Covers directed energy weapons, organized stalking, electronic harassment, legal rights, coping strategies, and scientific research. Fully integrated with the TI Assistant through RAG (Retrieval-Augmented Generation).

Professional Directory

Find professionals who understand and believe TI experiences: attorneys familiar with harassment laws, medical doctors aware of DEW exposure effects, therapists who validate TI experiences, psychiatrists, psychologists, and private investigators. Community-verified listings.

06

SECURITY & PRIVACY

Your data, your control, always

PRIVACY & SECURITY

Defense in depth — multiple layers of protection

Two-Factor Authentication

Secure your account with email OTP or authenticator app (TOTP). Account lockout after failed attempts.

Encryption at Rest & Transit

AES-256 encryption for stored data. TLS 1.3 for all communications. Bank-grade protection.

Blockchain Integrity

Every document and signature cryptographically hashed and anchored to an immutable ledger.

Privacy-First Architecture

Minimal data collection. Pseudonymization. You control visibility of every piece of data.

07

DATA STRATEGY

From individual stories to court-ready evidence

THE CORE IDEA

If we collect the right data, in the right format, from enough people, over enough time — the evidence will construct itself.

The patterns in the data will point to who is responsible, how they operate, and where the proof can be found.

→ One report = dismissed as anecdotal

→ 100 similar reports = a pattern

★ **1,000 corroborated reports = evidence**

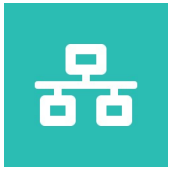
THREE-LAYER DATA ARCHITECTURE

Three databases, each optimized for different analysis

Relational Database

The Card Catalog

PostgreSQL stores all raw data. Append-only for legal integrity. SHA-3 hashing and trusted timestamps on every submission.



Graph Database

The Connection Map

13 node types and dozens of relationship types. Reveals hidden connections between TIs, organizations, locations, and incidents.

Vector Database

The Meaning Finder

Converts narratives into semantic embeddings. Finds similar experiences across TIs even when they use completely different words.

ANALYSIS ROADMAP

Three phases of increasing analytical power

Phase 1

Year 1: 50-500 TIs

Count & Describe

- Demographic profiles
- Symptom prevalence
- Geographic heat maps
- Aggregate damage quantification

Phase 2

Year 2-3: 500-5K TIs

Correlate & Connect

- Cross-case entity resolution
- Temporal sequence mining
- Geographic-temporal clustering
- Automated pattern detection

Phase 3

Year 3-5: 5K+ TIs

AI Evidence Construction

- Topic modeling (BERTopic)
- Graph neural networks
- Causal inference analysis
- Automated evidence packages

BUILDING COURT-READY EVIDENCE

Rigorous methodology designed for legal admissibility

Corroboration Requirement

No finding is promoted to evidence based on a single TI. Minimum 3+ independent TIs with no known prior contact.

Control Comparisons

Every pattern is checked against control groups. If TI locations cluster near military bases, we also check hospitals and universities.

Null Hypothesis Testing

Every finding includes a p-value. Legal evidence requires $p < 0.01$ — less than 1% chance the pattern occurred by coincidence.

Falsifiability Documentation

For every conclusion, we document what would disprove it. Courts respect methodology that actively tries to challenge its own findings.

Full Reproducibility

All procedures documented so independent experts can repeat the analysis. Meets the Daubert standard for scientific evidence in court.

08

ROADMAP & CALL TO ACTION

The path forward — and how you can be part of it

IMPLEMENTATION ROADMAP

A five-year plan to build undeniable evidence

2026
Foundation

- Finalize all interview templates
- Launch platform & onboard 100-500 TIs
- First descriptive analytics report
- Environmental Baseline template

2027-28
Scale & Discover

- Scale to 2,000-5,000 active TIs
- Deploy vector database & embeddings
- Cross-case entity resolution
- First comprehensive analysis reports

2028-30
AI Evidence

- Advanced NLP & topic modeling
- Graph neural networks
- Causal inference analysis
- Court-ready evidence packages

JOIN THE MOVEMENT

Your voice matters. Together, we are stronger.

Sign the Declaration

Add your voice to the collective statement

Connect with the Community

Find others who share your experience

Document Your Experience

Every data point strengthens the evidence

Spread the Word

Share the platform and grow our numbers
